BIRTH OF AN INDUSTRY.

Nearly \$35,000 Worth of Potash Produced in 1915.

Potash salts were produced in the Juited States in 1915 to the value of 342,000, according to the Unite: States geological survey. Though this figure is of interest as showing a small beginning in the demestic per ash industry, it becomes of little in portance if the total needs of the country are considered, for it repre sents a quantity consumed in less that a week under normal conditions,

tilizers, kamite, manure salts, and J. Harve Turnure, who will be re- of those in 1913. Taking all the pot ash salts together, the imports in 1915 were about one-tenth of those under normal conditions. In the survey report on the subject,

W. C. Phalen states that potash was recovered within the United States as a product from the manufacture of Portland cement at Riverside, Cal. Byproduct potash from this source has vielded a considerable revenue, owing to the abnormally high price for these salts, and in obtaining it two other purposes have been subserved - first,

be converted into cement, and second, he elimination of the dust nuisance. At Riverside a discharge of 100 tons of dust a day over the surrounding orange groves has been prevented.
